

ABSTRACT OF THE DISCLOSURE

A seal having a wall or element contoured and of a predetermined shape as, for example, in the form of a right circular cylinder, an extension member and a curved sheet member joined to an extension member, with the curved sheet member along the element and curved about the element such that the curved sheet member is spaced from a surface to which the extension member is attached, such as a window sill, so that the curved sheet member is spaced from the surface and the element rolls and is compressed to seal the interface between the sash and the sill when the sash is closed against the sill with minimum abrasion of the seal.
